Heat Shrink Tubing Installation

Select the correct splice size for the wire gauge. Strip the wires 0.3" (7.6 mm) from the end and insert into the crimp barrel.

Making sure the wire end is properly seated, make the crimp connection using a tool designed for insulated splices.

Apply heat directly to the splice, working from the center out to the edges, using a hot air gun or other heat source, until the tubing shrinks and the adhesive flows. Allow to cool before inspecting splice and checking the integrity.

FUSE TAP ADAPTER

EC FTA-1 (ATC/ATO).....EC MFTA-2 (ATM-MINI)

Now you can tap the hot side of flat automotive fuseblocks to add an additional circuit quickly and easily. Radios and other add-on accessories can be connected with little trouble or expense. Simply slip the bent end of the FTA-1 Fuse Tap Adapter over one leg (Fig. 2) of an ATC fuse and insert the fuse into the hot side of the fuseblock. After insertion, the male tab will protrude from the fuseblock (Fig. 3). To tap into the block for a new circuit, simply slip a crimped fully insulated .250 female quick disconnect onto the tab (Fig. 4). That's all there is to it!
